New Branch (master) created in GIT and push required file under master branch

The screenshot shows the GitHub interface for a repository named 'Ecomm-Project3'. The repository is public and has a 'master' branch. A message indicates that the current branch is 3 commits ahead of and 2 commits behind the 'main' branch. Below this, a list of files is shown, including 'build', '.dockerignore', '.gitignore', 'Dockerfile', 'Testfile', 'build.sh', 'deploy.sh', 'docker-compose.yaml', and 'jenkinsfile'. Each file has a timestamp indicating when it was last updated.

- 3) dev branch is merged into master once validation completed
- 4) Jenkins master pipeline runs and pushes image to DockerHub private repo.

Executed Multibranch Pipeline

The screenshot shows the Jenkins web interface for a multibranch pipeline named 'multi'. The left sidebar contains navigation links: Status, Configure, Scan Multibranch Pipeline Now, Scan Multibranch Pipeline Log, Multibranch Pipeline Events, Delete Multibranch Pipeline, Build History, Project Relationship, Check File Fingerprint, and Rename. The main area displays the 'multi' pipeline with a 'Branches (2)' tab selected. Below this is a table showing the status of the 'dev' and 'master' branches.

✓	☁	master	1 hr 27 min #2	1 hr 36 min #1	17 sec

Below the table, there is a section for 'Icon: S M L' with a dropdown menu currently set to 'L'.

Jenkins automatically detect dev/master branches and trigger build based on commits

The screenshot shows the Jenkins console output for a build triggered on the 'dev' branch. The output is a log of pipeline stages and actions. The build is successful, as indicated by the green checkmark and the message 'Pipeline SUCCESS for branch: dev'.
